What is Mevert?

Mevert comes from "Me" + "Vert" - representing everyone: Introverts, Extroverts, and Ambiverts. Mevert is a social platform that helps people find companions for real-world activities and events. Sometimes you want to go to a movie, stand-up comedy show, concert, cafe, or any event, but you don't want to go alone. With Mevert, users can create an event and share their plan. People who are interested in the same activity or location can discover the event and connect to join. Mevert makes it easier to meet new people, share experiences, and explore places together.

Tech Stack

Backend: Python / Flask

Frontend: HTML, CSS, JavaScript

Database: PostgreSQL

Deployment: Render

Source code :

The full implementation of Mevert is maintained in a private repository. Access can be provided upon request for technical review or potential collaboration.
